

INFRONT OUTBACK

The Track Trailer Camper is designed to provide maximum convenience, comfort, durability and flexibility in a compact touring system. The Integral Locker System makes the difference and provides ample readily accessible storage for food, soft luggage, tools, gas bottle, and even a portable generator.

The inner side locker can be fitted out as a mini kitchen. The 150mm thick foam mattress fits neatly between the lockers and is secure well above the ground.

The Guiding Star G.S.T. 64 Trailer is the campers base.

Designed with the ultimate adventure in mind, the G.S.T. 64 Trailer is an innovative concept, setting a new standard for this specific market. It has been specifically developed to meet the demand for a

highly reliable and durable heavy duty trailer for outback touring, general purpose use, trade and commercial applications and as the base vehicle for the TRACK TRAILER CAMPER.

FIELD TESTED

Field testing was undertaken by the directors of GUIDING STAR in conjunction with a tour operator who had previously abandoned trailers in remote areas due to mechanical and structural failure. The prototype was subjected to testing over such well known outback tracks as the Gunbarrel Highway, Canning Stock Route, Gibb River Road, Bungle Bungle, Birdsville and Len Beadell Tracks.

After 65,000km without maintenance or repair, the test unit suffered no structural, suspension or mechanical failure.
